***Election/Restrictions***

This application contains claims directed to the following patentably distinct species:

I. Species corresponding to Figs. 1-5, an embodiment of encoding and decoding video signals (the examiner believes that claims 1-26 and 30 are in this species).

II. Species corresponding to Fig. 10, a distinct embodiment of adaptive encoding and decoding of video signals (the examiner believes that claims 27-29 and 31-33 are in this species).

The species are distinct because they have different mode of operations.

1. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and **a listing of all claims readable thereon, including any claims subsequently added**. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

2. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
